***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I        Claims 1-17, drawn to method of plasma etching, classified in class 438 subclass 689+.

II.      Claims 18-34, drawn to Computer-readable medium, classified in class 712, subclass 32+.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be manually performed without the use of the computer.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with Mr. Moser on 5/16/02 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-17.

Affirmation of this election must be made by applicant in replying to this Office action.

Claims 18-34 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

***Claim Rejections - 35 USC § 112***

Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 17, line 10, "said sulfur dioxide gas" lacks antecedent basis.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim et al..

Kim et al., figs. 1-9 and related text on col. 1-9 discloses the claimed process for etching transition metal thin film which includes a further layer of BST, STO, PZT or PLZT having a high dielectric constant by using etching gas mixture of chlorine and carbon monoxide (col. 4, lines 34-37).

Art Unit: 2813

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have etched the dielectric layer having a high dielectric constant by gas mixture of chlorine and carbon monoxide at suitable control parameters such as gas ratio, power, pressure, temperature for obtaining a best result.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Iguchi and Moise et al. teach the use of chlorine and carbon oxide gas in plasma etching process.
